Filters, HVAC Systems

F · https://fo.umich.edu/fosg/filters-hvac-systems/

Maintenance Services is responsible for replacing filters in the large heating, ventilation and cooling (HVAC) units in general fund buildings. These filters are specifically designed to remove particles from the air to prevent contamination of interior spaces. Filter replacements are planned and scheduled through the Facilities & Operations Preventive Maintenance program.

In most cases, building occupants do not have access to the areas housing the HVAC equipment. Questions about filters and filter replacement can be directed to the Facilities Service Center at 647-2059.
