# Tanks, Underground Water Retention

T · https://fo.umich.edu/fosg/tanks-underground-water-retention/

Underground water retention tanks have been installed in two locations (to date) on the University of Michigan campus. The tank located under the Palmer Street Parking Structure (Life Sciences Institute) has pumps that are maintained by Utilities. Environment, Health and Safety is responsible for cleaning this tank once every 10 years.

Athletics department has a similar tank and it is Athletics' responsibility to maintain this tank. Athletics department will authorize Facilities & Operations to perform any service on this tank and the proper work order forms will be forwarded at that time.
