Wells, Water

W · https://fo.umich.edu/fosg/wells-water/

Some university facilities are in areas where municipal utility services may not be provided. When a municipal water source is not available, water is provided from wells located on the property. Most wells are the responsibility of the department or school responsible for the oversight of the building or property. Maintenance Services is responsible for maintaining and repairing wells, and the pumps associated with them, at the Matthaei Botanical Gardens only.

To report problems with water service at the Matthaei Botanical Gardens, call the Facilities Service Center at 734-647-2059 or visit requests.fo.umich.edu.

Modifications, additions and removals to the water distribution system are performed at customer expense.

Note: To ensure the safety of the domestic water system, departments may not directly attach equipment or instruments to domestic water systems. Contact Facilities & Operations for safe, code-compliant installation of your department equipment.
